Washoe County Utility Services Division

1998 Water quality report for the Stampmill Water Service Area Water served to Stampmill customers is groundwater supplied by two wells.

Analysis results are reported in parts per million (ppm) unless specified. To put this in perspective one part per million equals:

- * One cent in ten thousand dollars
- * One minute in two years

The term Maximum Contaminant Level, or "MCL", refers to the highest reading allowed by State law, minimizing health risks. The term Maximum Contaminant Level Goal, or "MCLG", refers to the level of a contaminant in drinking water which there is no known or expected risk to health.

We are pleased to report that your water meets or exceeds all standards set for quality and safety.

The are precious to report that your water meets or exceeds all standards set for quality and safety.

*The sum of these four constituents composes total trihalomethanes. The MCL for total trihalomethanes is 0.10 ppm

How can I get more information about this water quality report?

For more information please call our water quality section at 954-4600

The presence of contaminants in drinking water does not necessarily indicate that the drinking water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency "hot-line" at 1-800-426-4791
