## ounty Utility Services

1998 Water Quality Report for the STMGID Water Service Area (For Customers East of Highway 395)

Water served to STMGID customers is groundwater supplied principally by three different wells. These wells are located near Zolezzi Lane. If needed, wells #5 and #6 can provide water to the east side as well. Information on these two wells is avaliable upon request.

Analysis results are reported in parts per million (ppm) unless specified. To put this in perspective one part per million equals:

- \* One cent in ten thousand dollars
- \* One minute in two years

The term Maximum Contaminant Level, or "MCL", refers to the highest reading allowed by State law, minimizing health risks. The term Maximum Contaminant Level Goal, or "MCLG", refers to the level of a contaminant in drinking water which there is no known or expected risk to health.

We are pleased to report that your water meets or exceeds all standards set for quality and safety.

\*The sum of these four constituents composes total trihalomethanes. The MCL for total trihalomethanes is 0.10 ppm

## How can I get more information about this water quality report?

For more information please call our water quality section at 954-4600

The presence of contaminants in drinking water does not necessarily indicate that the drinking water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency "hot-line" at 1-800-426-4791
